

## Analyse des objectifs

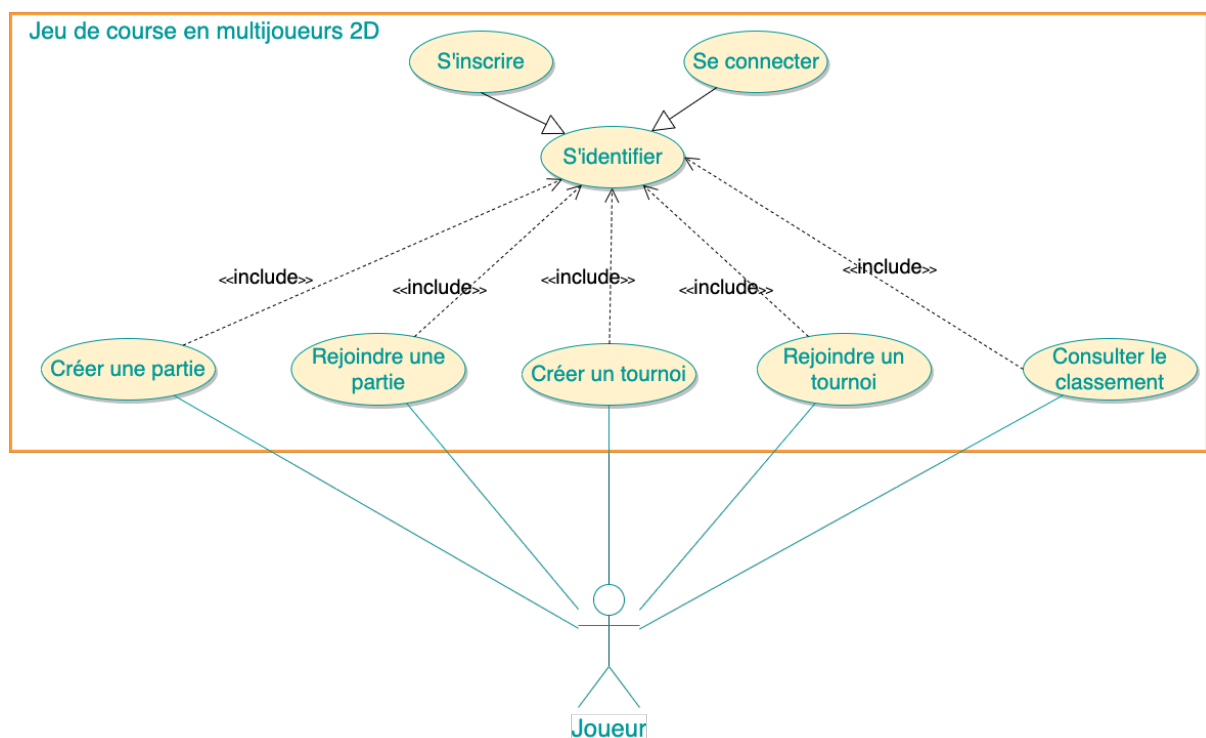

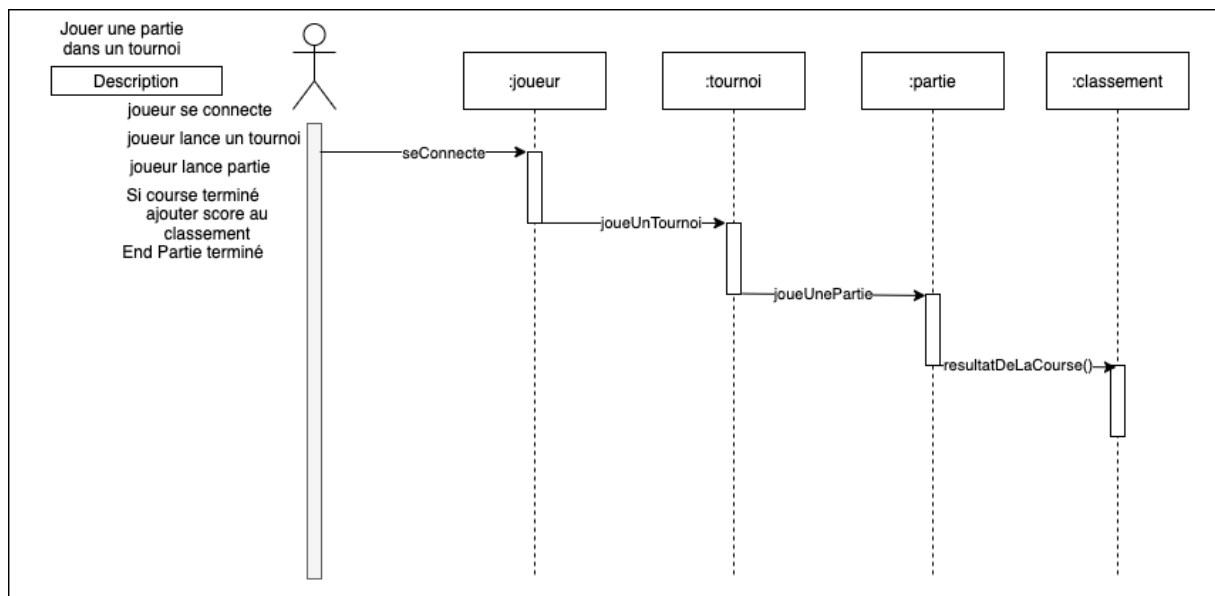

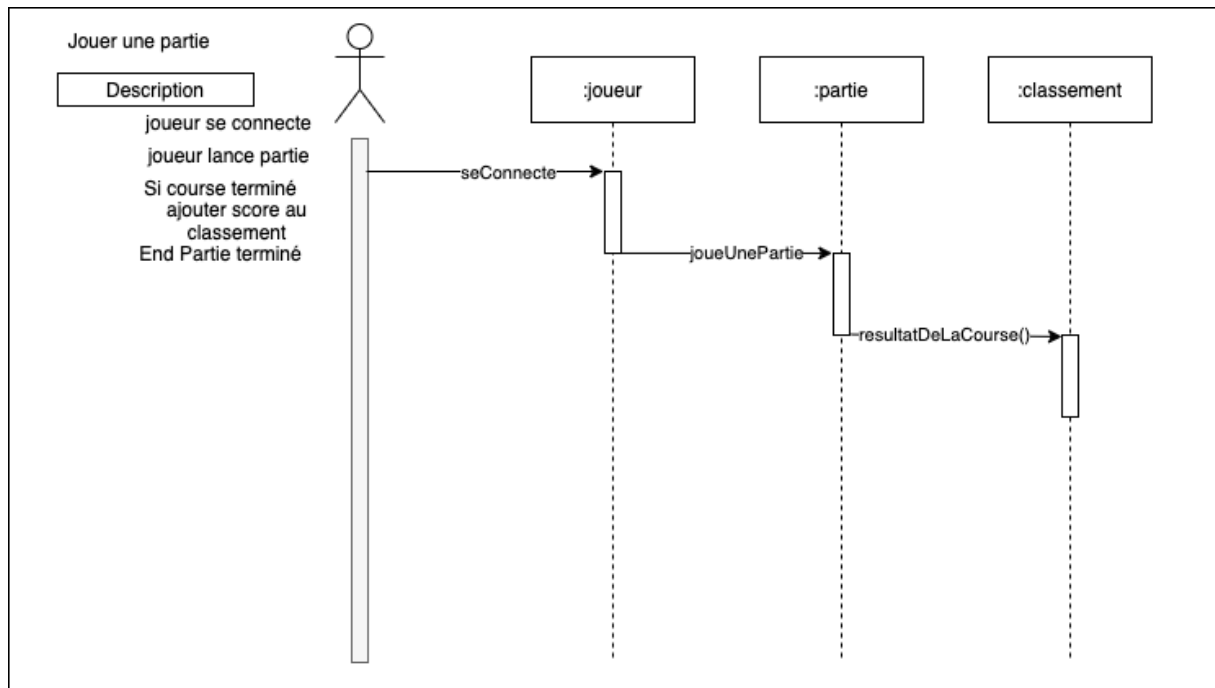

## Modèles base de données

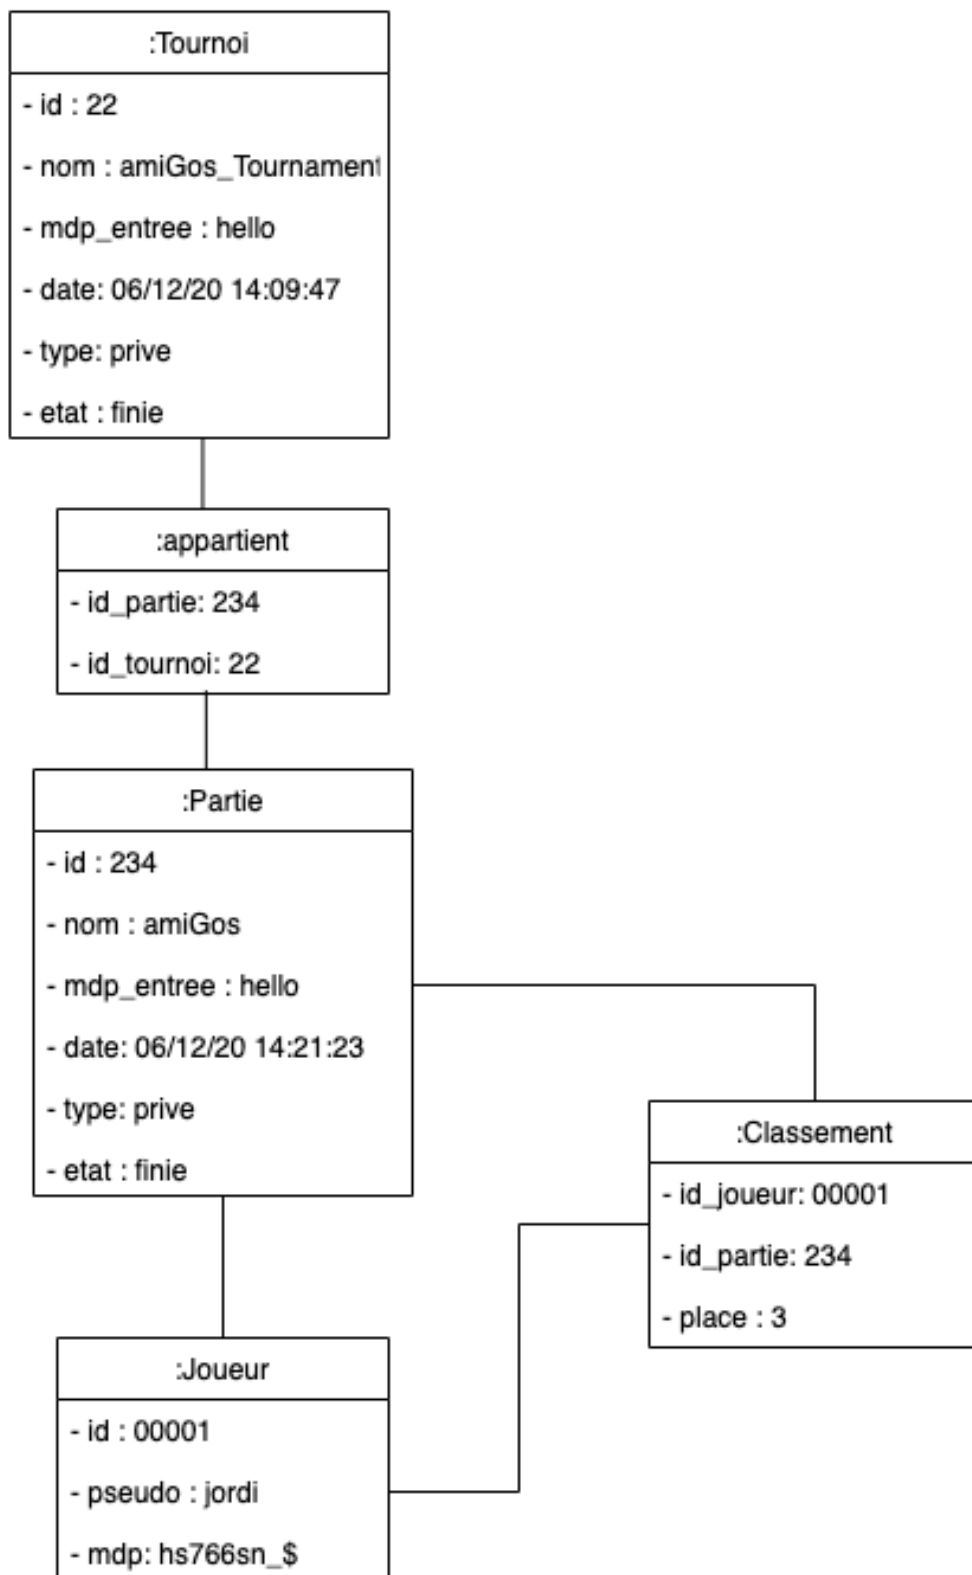

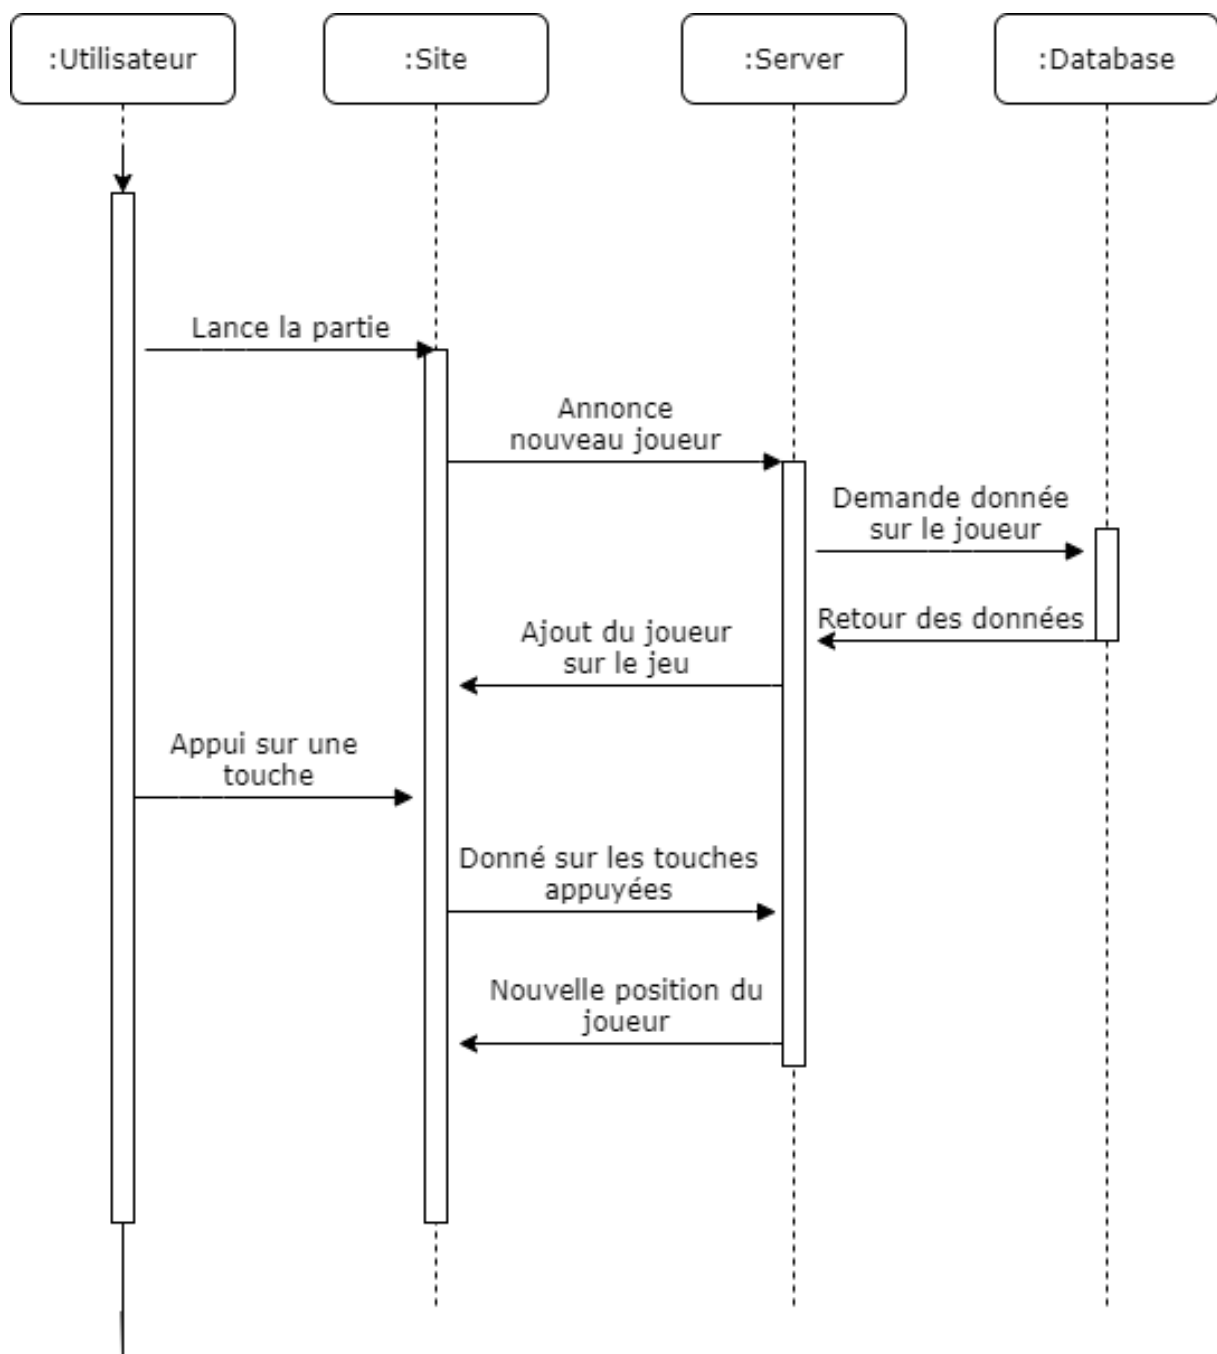

## Modèles Système

## Modèle Algorithme

Dès qu'un joueur se connecte, la connexion est donnée par socket à tous les autres clients qui affiche sur leur client le nouveau personnage. Dès qu'un mouvement est fait, de la même manière., les donnes sont diffusées à tous les autres clients pour qu'ils changent les différentes positions.

## Implémentation client/serveur

L'entièreté du code est disponible sur le répertoire GitHub suivant :

<https://github.com/JuanKerber/projet-transverse1>

```
1 // Server config
2 const express = require('express');
3 const app = express();
4 var server = require('http').Server(app);
5 const io = require('socket.io').listen(server);
6 const path = require('path');
7
8 app.use('/js', express.static(__dirname + '/src/app/game/js'));
9 app.use('/assets', express.static(__dirname + '/src/assets'));
10
11
12 // Serve only the static files form the dist directory
13 app.use(express.static(__dirname + '/dist/demo'));
14
15 app.get('/*', function(req, res) {
16     res.sendFile('index.html', {root: 'dist/demo/'});
17 });
18
19
20
21 // Player config
22 const players = {};
23 io.on('connection', function (socket) {
24     console.log('a player connected: ', socket.id);
25
26     // create a new player and add it to our players object
27     players[socket.id] = {
28         flipX: false,
29         x: Math.floor(50),
30         y: Math.floor(100),
31         playerId: socket.id
32     };
33
34     // send all current players
35     socket.emit('CURRENT_PLAYERS', players);
36
37     // update all other players of the new player
38     socket.broadcast.emit('NEW_PLAYER', players[socket.id]);
39
40     socket.on('PLAYER_CONNECTED', function () {
41         socket.broadcast.emit('PLAYER_CONNECTED', players[socket.id]);
42         console.log('A player connected!')
43     });
44
45     // update movements of player
46     socket.on('PLAYER_MOVED', function (movementData) {
47         players[socket.id].x = movementData.x;
48         players[socket.id].y = movementData.y;
49
50         socket.broadcast.emit('PLAYER_MOVED', players[socket.id]);
51     });
52
53     // when a player disconnects, remove them from our players object
54     socket.on('disconnect', function () {
55         console.log('user disconnected: ', socket.id);
56         delete players[socket.id];
57
58         // emit a message to all players to remove this player
59         io.emit('PLAYER_DISCONNECT', socket.id);
60     });
61 });
62
63 // Start the server
64 const port = 8080;
65 server.listen(port, function(){
66     console.log('Listening on ' + server.address().port);
67 });
```

## Démo préliminaire

Une vidéo de démonstration du projet à ce stade du développement est disponible sur le lien suivant :
